

## Remember — disposable does NOT always mean flushable!

Our toilets are designed for water, human waste and toilet paper – nothing else! Other items flushed down the toilet can cause blockages and damage to the sewer system. The results aren't pretty: raw sewage overflowing to your home or yard, contact with disease-causing organisms, damage to the environment, and an expensive cleanup. Luckily, it's easy to prevent clogs and damage! Just keep other items out of the sewers by throwing them away instead of flushing.

The following items should NEVER be poured or flushed down any drain:

		
<p>Cooking scraps or remains, including sauces and soups</p>	<p>Any facial wipes, hand wipes, moist towelettes, or cleaning wipes (Clorox® brand, etc.)</p>	<p>Paper or plastic bags</p>
		
<p>Any paper products other than toilet paper – paper towels, napkins, mail, etc.</p>	<p>Diapers or disposable underwear</p>	<p>Prescription or over-the-counter medications</p>
		
<p>Cigarette butts</p>	<p>Cotton swabs or cotton balls</p>	<p>Excess hair or hair clippings from shaving, etc.</p>

*Help prevent blockages in the sewer pipes and at water treatment plants by keeping these products out of our sewers!*
