

“Gigabit Internet” service comes to High Point

One “gig” per second is 100 times faster than the typical user’s Internet speed

In 2014, High Point drew the attention of high-tech start-up companies and other entrepreneurs looking for a place to open a business. At the same time, High Point’s existing businesses and residents had reason to celebrate.

North State Communications announced that – due to its ongoing efforts and investments totaling nearly \$100 million over the course of the last several years – High Point became a “gig” community during the year.

Very few cities in the US can brag about being a “gig” community – an area where Internet connections are amazingly fast, up to 1 gigabit per second. High Point now joins that elite list.

According to Royster Tucker, III, CEO of North State, “Tens of thousands of homes and businesses in High Point have the coveted ‘gigabit Internet’ available to them. It is here, now, at a mass market level.”

North State Communications and its “extensive fiber-to-the-home and business infrastructure will support today’s ultrafast demands,” said Tucker.

A North State Communications crew installs fiber, helping make High Point a “gig” community.
